SIMRAN

(+91)7206089479 ◇ Panipat, Haryana
simrannkapoor60@gmail.com ◇ linkedin.com/in/simran-kapoor ◇ github.com/simrann-kapoor

SKILLS

Languages	C++, Python, Java, JavaScript, HTML5, CSS3, SQL
Frameworks & Technologies	Node.js, express.js, Django, Flask, FastAPI, Shopify Liquid
Cloud & Data	Microsoft Azure, SQL Server, Data Analysis, Docker, MongoDB
Tools	GitHub, Shopify CLI, Power BI, Postman, Jupyter Notebook

EXPERIENCE

Frontend Shopify Developer Intern, *Dagar.io (Remote)* June 2026 – October 2026

Developed and customized Shopify storefronts using Liquid, HTML, CSS, JavaScript, and JSON, converting Figma designs into pixel-perfect, responsive pages. Performed QA testing across layouts, links, and responsiveness while collaborating with designers/developers to optimize storefront performance.

PROJECTS

NL-to-SQL Reporting Assistant

- Built a full-stack app that converts plain-English business questions into T-SQL using a locally hosted LLM (Ollama), with a React UI showing results tables and the generated SQL.
- Designed a schema-aware prompting layer with a curated catalog of reporting views, column descriptions, join rules and few-shot examples, so the model only sees approved data.
- Enforced safe execution with sqlglot-based SQL validation (single SELECT, view whitelist), input guardrails, a read-only SQL Server login, query timeouts and row limits and Logged every request to MongoDB for auditing and measured accuracy and latency on a golden question set to tune prompts.

AURELIS – Expense Anomaly Detector

- Built a full-stack expense tracker that flags unusual spending with per-category z-score analysis, using each user's own past spending as the baseline, in a team of 3.
- Moved the app from browser localStorage to a REST API (Node.js, Express, MongoDB Atlas) with an MVC structure, and kept the existing frontend working without a redesign.
- Added secure accounts with bcrypt-hashed passwords and JWT login, and made sure users can only see or change their own data.

Smart IoT Heartbeat Monitoring System with Cloud Integration

- Built an IoT health monitor using Arduino UNO, MAX30102 sensor, and ESP01 WiFi module to capture heart rate and SpO2 in real time.
- Implemented concurrent data acquisition and streamed live vitals to ThingSpeak for remote monitoring and visualization.

EDUCATION

Bachelor in Computer Science, Chitkara University CGPA: 9.03 — Expected 2028

Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, DBMS, OOPS, Machine Learning, Cloud Computing.

CERTIFICATIONS

Microsoft: AI-900, AZ-900, DP-900, PL-300, Azure AI Apps and Agents Developer Associate (AI-103)

LEADERSHIP

Events Team Executive — GeeksforGeeks Student Chapter

- Coordinated technical and non-technical events and organized coding workshops and competitions with student teams, promoting peer learning on campus.
